Why do we need TIIIME?

- The First-year students have been divided into a large number of groups, each having their own separate schedules and timetables
- Accessing the correct timetable for a particular week of the semester becomes a cumbersome task

How is TIIIME different from other productivity and calendar apps?

- It is dynamic in its functioning

- A user can make personalized changes to the common timetable that need not be mirrored in everyone's schedules

-A user can also add events and reminders to their own schedules.

How does TIIIME work?

Future Prospects

-To improve productivity of users, it shows a to-do list in the same tab as the timetable(dynamic, through classroom API)

-To incorporate weekly digest e-mails within notifications received

-plan to extend our database to incorporate senior years and M.Tech student timetables also.
